All prices are final prices (gross prices) for consumers (B2C) from Germany, international prices may differ and are available on request.

They include further: $\mathbf{9 2 \%}$ or better aluminum coating with protection layer, center mark for laser adjustment, interferometric evaluation on CD, stable packaging, shipping (only valid for shipping in Germany. The carriage charges for overseas will be calculated and added upon receipt of order; charges depend on weight, size of parcel and delivery location).

Please ask for current delivery times. For precise information please add details regarding the desired diameter, focal ratio and material thickness to your request.
Please note: The ordering procedure of both the glass substrate and the mirror coating will vary by several weeks. My primary goal is to provide a mirror which you will enjoy for many years. The manufacture of precision optics is a complex process. Thus you cannot predict the exact labor input nor quantify precisely the time necessary. This is why any information about delivery time will be estimated to the best of my knowledge and is not binding.
